

THE PROCESS HOW TO CONNECT PVC TO POLY PIPE

CATEGORY: GARDENING

Apply PVC cement outside the PVC pipe.

Step 9

Apply PVC cement inside this area of the PVC male adapter.

Step 10

Insert cemented PVC end to cemented side of the male adapter. Hold 30 sec.

Step 2

Twist the threaded outside of the male adapter to the threaded inside of the female adapter. Hand tighten.

Step 4

Insert this side of the female adapter into the Poly pipe.

Step 5

Screw the clamp tightly here.

Step 6

Apply primer outside the PVC pipe.

Step 7

Apply primer inside this area of the PVC male adapter.

Step 1

Apply generous amount of PTFE thread seal tape here.

Step 3

Use fire to soften the end of the poly pipe so that the insert of the female adapter easily goes inside the poly pipe.

Concluding remarks

Allow 15 minutes for handling strength. Allow around two hours time at temperatures above 65 degree F before testing the irrigation system.
